ABSTRACT

VyanjanVibes - Online Food Ordering System aims at making the food ordering process easy in today's fast-paced societies. In the proposed system, customers don't have to visit restaurants or wait in long lines; they can order their favorite meals from the comfort and convenience of their homes. This system also takes advantage of technological advancements to streamline the ordering process, save time, avoid inconvenience, and make dining more accessible.

In a diverse country like India, where the food industry is booming, not everyone has the time or ability to dine out. Factors such as busy schedules, traffic, and physical challenges may prevent people from enjoying their favorite foods at restaurants. Some may also live in remote areas where access to quality food options is limited.

This system seeks to address these issues. With this platform, customers can explore various menus, customize their orders, and enjoy timely deliveries right at their doorstep.

During the ordering process, customers will log in through their credentials, select their desired items, and place their orders effortlessly.

.

ACKNOWLEDGEMENT

I take this occasion to thank God, almighty for blessing us with his grace and taking our endeavor to a successful culmination. I extend my sincere and heartfelt thanks to our esteemed guide, Mrs.Vibhavari Jawale for providing me with the right guidance and advice at the crucial juncture sand for showing me the right way. I extend my sincere thanks to our respected Centre Co-Ordinator Mr. Rohit Puranik sir, for allowing us to use the facilities available. I would like to thank the other faculty members also, at this occasion. Last but not the least, I would like to thank my friends and family for the support and encouragement they have given me during the course of our work.

1. INTRODUCTION

In today's fast-paced world, where technological advancements and connectivity are rapidly transforming daily life, the way we order food is evolving as well. Traditional dining methods, such as physically visiting restaurants, can often be inconvenient, especially for those with busy schedules or mobility issues. In a country like India, with its rich culinary heritage, there is a growing demand for easier access to a wide variety of cuisines. "VyanjanVibes" is an online food ordering system developed to address this need by simplifying and enhancing the food ordering process.

This system allows individuals to enjoy their favorite meals from the comfort of their homes, at their convenience, and from anywhere they want. As technological connectivity continues to rise and advancements reshape various aspects of our daily lives, the food ordering process is no exception. "VyanjanVibes" responds to the growing demand for a digital ecosystem that seamlessly connects customers with restaurants while enhancing the overall experience of dining. By leveraging the power of technology, data, and user-centric design, VyanjanVibes seeks to revolutionize the way food is ordered and delivered.

1.1 Purpose

The purpose of this document is to provide a detailed specification of the features and functionalities of the "VyanjanVibes" food ordering system. It outlines the system requirements, architecture, and user interactions, offering a comprehensive guide to understanding how the platform operates and meets the needs of its users..

1.1 Scope

The "VyanjanVibes" food ordering system is designed to create an efficient and user-friendly platform for ordering and delivering food. This system will allow users to register, securely log in, and manage their profiles with ease. Restaurants will be able to join the platform, manage their menus, and handle orders efficiently. The system will provide an intuitive interface for customers to browse menus, customize their orders, and place them conveniently. Overall, VyanjanVibes aims to revolutionize the food ordering experience by offering a streamlined, secure, and user-centric platform that caters to the needs of customers, restaurants, and administrators alike

1.1 Objective of Project on VyanjanVibes:

The objective of the VyanjanVibes food ordering system is to develop a versatile online platform that enhances the ease and efficiency of ordering food. The system aims to provide users with the convenience of browsing, ordering, and paying for meals from a variety of restaurants without the need to visit them in person, thus saving time and effort. By supporting restaurants with a digital space where they can showcase their menus, manage orders, and reach a broader audience, VyanjanVibes seeks to increase their profitability and market presence.

Additionally, the platform is designed to ensure user satisfaction through a seamless experience, featuring intuitive navigation, real-time order tracking, and personalized recommendations, making it easy for customers to find and order their favorite dishes. To foster trust and encourage regular use, the system will incorporate robust security measures to protect user data and payment information. Furthermore, VyanjanVibes will facilitate continuous improvement by allowing customers to provide feedback through a review and rating system, helping restaurants enhance their offerings and enabling other users to make informed choices. Overall, VyanjanVibes aims to optimize the food ordering process for both customers and restaurants. The ultimate goal is to create a reliable, user-friendly platform that meets the evolving needs of the food delivery industry.

1.2 Functionalities provided by VyanjanVibes are as follows:

The VyanjanVibes project provides a suite of functionalities designed to streamline and enhance the food ordering process for users. Key functionalities of the system include:

1. **User Registration and Authentication:** Users can easily create accounts and securely log in to the platform. Robust authentication mechanisms ensure user data is protected and that only authorized individuals have access to their accounts.
2. **Restaurant Profiles:** Detailed information about each listed restaurant is provided, including menus, pricing, and contact details. This allows users to make informed decisions based on their preferences and needs.
3. **Order Placement and Customization:** The platform enables users to browse restaurant menus, customize their orders, and place them effortlessly. Users can select items, specify preferences, and review their orders before finalizing the purchase.
4. **Payment Integration:** The system supports various payment methods, including credit/debit cards and digital wallets, ensuring secure and convenient transactions.
5. **Restaurant Management Dashboard:** Restaurant owners can manage their profiles, update menus, and process orders through a dedicated backend dashboard. This helps streamline restaurant operations and enhances customer service.
6. **Data Integrity:** The system ensures accurate and consistent information across the platform, minimizing errors and providing users with reliable data about restaurants and menu items.
8. **Legal Compliance:** VyanjanVibes adheres to relevant legal requirements and data protection regulations, ensuring user privacy and security.

In summary, VyanjanVibes offers a user-friendly and efficient platform that connects customers with restaurants. Through its comprehensive set of functionalities, the project aims to simplify the ordering process, support restaurant operations, and deliver a seamless experience for all users involved.

2. REQUIREMENTS

Functional Requirements

FR 1. User Registration and Authentication:

- Users can register by providing necessary details such as name, email, and phone number.
- User authentication is required to access the platform, ensuring that only registered users can place orders.
- Forgot password functionality allows users to reset their passwords through a secure process.

FR 2. Restaurant Profiles:

- Restaurants can create and update their profiles, including menu items, pricing, and contact details.
- Restaurants can manage their operational hours and availability.

FR 3. Order Placement and Customization:

- Users can browse restaurant menus, customize their orders, and place them with ease.
- The system allows users to review their orders before finalizing the purchase and provides options for special requests or instructions.

FR 4. Payment Processing:

- The system supports multiple payment methods, including credit/debit cards and digital wallets.
- Payment transactions are processed securely, and users receive confirmation of their payment.

FR 5. Order Management:

- Users can view their order history and the status of their current orders.
- Restaurant owners can manage incoming orders, update order statuses, and handle order fulfillment.

Non-Functional Requirements:

NFR 2. Security:

- . User passwords are securely stored using encryption techniques.
- Access controls ensure that users can only access authorized features.

NFR 2. Performance:

- The system should handle a large number of simultaneous users and orders without significant slowdowns.
- The platform must efficiently load images and content to provide a smooth and responsive user experience.

NFR 3. Scalability:

- The system should be designed to accommodate future growth in terms of user numbers and restaurant listings.
- It should support scaling up infrastructure to handle increased traffic and data.

NFR 4. Usability:

- The user interface should be intuitive and easy to navigate for both customers and restaurant owners.
- Error messages and system notifications should be clear and guide users effectively through any issues.

NFR 5. Reliability:

- The system should be available and operational 24/7 with minimal downtime to ensure consistent access for users and restaurant owners.

NFR 6. Data Integrity:

- Data integrity and consistency are maintained through proper validation processes and robust database design.
- The system should handle data updates and transactions accurately without errors.

NFR 7. Data Privacy:

- Personal and sensitive user data should be stored securely and comply with relevant data protection regulations.
- The platform should implement measures to protect user privacy and prevent unauthorized access to personal information.

Other Requirements:

Hardware and Network Interfaces:

Back-end Server Configuration:

- Intel Pentium-IV Processor
- 128 MB RAM

Front-end Client Configuration:

- Intel Pentium-III @ 650 MHz Processor
- 128 MB SDRAM
- 10 GB Hard Disk Drive
- 104 Keys Keyboard
- PS2 Mouse with pad

Software Interfaces:

Software configuration for back-end Services:

- Java 11
- MySQL 8.0
- STS 3.9.18

Software configuration for front-end Services:

- ReactJS 18
- Bootstrap 5.3.3
- VS Code 1.92.2

4.DATABASE DESIGN

Database Design

The following table structures depict the database design.

Table 1: users

```
mysql> desc users;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
address	varchar(100)	NO		NULL	
email	varchar(255)	NO	UNI	NULL	
password	varchar(255)	NO		NULL	
phonenumber	varchar(15)	NO		NULL	
username	varchar(50)	NO		NULL	

6 rows in set (0.02 sec)

Table 2: restaurants:

```
mysql> desc restaurents
-> ;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
restaurent_name	varchar(100)	NO	UNI	NULL	
address	varchar(100)	NO		NULL	
category	varchar(20)	YES		NULL	
email	varchar(20)	NO	UNI	NULL	
image	longblob	YES		NULL	
mobilenno	varchar(15)	NO		NULL	
password	varchar(255)	NO		NULL	

Table 3: admin:

```
mysql> desc admins  
-> ;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
username	varchar(50)	NO		NULL	
email	varchar(20)	NO		NULL	
password	varchar(20)	NO		NULL	

4 rows in set (0.00 sec)

Table 4: orders:

```
mysql> desc orders;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
status	varchar(20)	NO		NULL	
orderdate	tinyblob	YES		NULL	
qty	int	NO		NULL	
totalprice	decimal(19,2)	NO		NULL	
restaurent_id	bigint	YES	MUL	NULL	
user_id	bigint	YES	MUL	NULL	

7 rows in set (0.00 sec)

Table 5: items:

```
mysql> desc items
-> ;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
description	varchar(100)	NO		NULL	
name	varchar(50)	NO		NULL	
price	decimal(19,2)	NO		NULL	
type	varchar(20)	YES		NULL	
restaurent_id	bigint	NO	MUL	NULL	

6 rows in set (0.00 sec)

Table 6: order_items:

```
mysql> desc order_items;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
price	decimal(19,2)	NO		NULL	
qty	int	NO		NULL	
item_id	bigint	YES	MUL	NULL	
order_id	bigint	YES	MUL	NULL	

5 rows in set (0.00 sec)

Table 7: carts:

```
mysql> desc carts;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
price	decimal(19,2)	NO		NULL	
qty	int	YES		NULL	
item_id	bigint	YES	MUL	NULL	
user_id	bigint	YES	MUL	NULL	

5 rows in set (0.00 sec)

Table 8:payments:

```
mysql> desc payments;
```

Field	Type	Null	Key	Default	Extra
id	bigint	NO	PRI	NULL	auto_increment
amount	decimal(19,2)	NO		NULL	
card_number	bigint	NO		NULL	
payment_date	tinyblob	NO		NULL	
payment_status	varchar(255)	NO		NULL	
order_id	bigint	YES	MUL	NULL	
user_id	bigint	YES	MUL	NULL	

7 rows in set (0.00 sec)

Conclusion

The food ordering system has revolutionized the way customers interact with restaurants, offering a seamless and efficient platform for both parties. By digitizing the ordering process, it eliminates the traditional barriers of time and location, allowing customers to access a wide range of dining options with just a few clicks. This system enhances customer satisfaction through convenience and reliability while providing restaurants with a scalable solution to manage orders and grow their business.

Looking forward, the system holds the potential for further innovations, such as incorporating personalized recommendations, real-time analytics for restaurants, and enhanced user experiences through AI and machine learning. The food ordering system is not just a tool for today's market but a foundation for future advancements in the food service industry.
